Professional Summary

Frontend Engineer with 4+ years of experience building production-grade cross-platform applications using React.js and React Native. Specializes in real-time data streaming with SSE, offline-first architecture, and measurable performance optimization. Focused on writing modular, maintainable code for reliable production-grade systems.

Skills

Frontend: React.JS, Next.JS, React Native, JavaScript(ES6+), TypeScript, HTML, CSS

State Management & Data Fetching: Redux, Context API, Zustand, React Query, REST APIs, GraphQL

Testing & Performance: Jest, React Testing, Code Splitting, Lazy Loading, Core Web Vitals, Memoization, Accessibility

Tools & DevOps: Git, Github Actions (CI/CD), Github Copilot, Cursor, Webpack, Postman, Jira, OKTA, Firebase

Experience

Software Engineer II, MRI Software – Vadodara (Hybrid) Sep 2023 – Present

- Led the development of an **AI-powered conversational platform**, from architecture and frontend implementation, enabling unified search delivering a single point of access to information and **insights across 300+ enterprise products**.
- Architected an **offline-first** data layer that enabled **100% of user workflows** to continue during network outages through local persistence and **automatic synchronization**, ensuring uninterrupted field operations.
- Engineered **server sent events (SSE)** based **AI response streaming** rendering output in 300ms chunks, eliminating UI blocking and delivering a smooth **real-time chat** experience within an enterprise product.
- Implemented **JWT-based** authentication and **role-based access control (RBAC)** combined with **OKTA-based OAuth** across 15+ configurable environments, securing user access across multiple roles and **3** global regions.
- Designed a scalable **client-side networking layer** with concurrent request execution and **deterministic retry mechanisms**, improving responsiveness and ensuring reliable API communication during high-volume operations.
- Conducted **code reviews** and established frontend best practices across a 15-engineer team, improving code quality.

Software Engineer, In Time Tec – Jaipur (Onsite) Feb 2022 – Sep 2023

- Migrated from **REST to GraphQL** using Apollo Client, eliminating over-fetching and reducing payload size by 60%.
- Configured user authentication and push notification workflows using **Firebase** and **OneSignal**.
- Build and maintained **reusable component** libraries, accelerating feature development and ensuring consistency.

Projects

MRI Ask Agora [Link] July 2024 - Present

- Built frontend of **AI-powered** conversational assistant embedded across **300+** MRI's real estate platforms, enabling property managers to query portfolio data, tenant records and draft communications in plain language.
- Empowered users to find key metrics & build compliance reports up to **80%** faster than traditional manual workflows.
- Integrated **markdown-based response** rendering with custom styling and **table support**, enabling clear visualization of structured AI-generated insights and reports within the conversational interface.

MRI Property Management X [Link] Sep 2023 - Present

- **Cross-platform** property management app used by residential and commercial property managers to automate leasing, tenant communication, and maintenance workflows — live across **3 regions** with **1.5K** downloads.
- Sustained **100%** of field operations in low-connectivity environments through an **offline-first** mobile experience.
- Built interactive commercial and financial dashboards to visualize portfolio performance, enabling faster decision-making.

Education

Rajasthan Technical University, B.Tech in Computer Science - 7.96 CGPA

Aug 2018 – Jun 2022

Achievement

- **2nd Place – MRI Hackathon:** Built a hands-free voice chatbot for automated tenant calls and post-call summaries.
- **Core Value Award - MRI Software:** For outstanding contributions and impact on product quality.
